OF SCHOOLS

OF PRIMARY HEALTH CARE FACILITIES

do **not** have access to **handwashing, basic hygiene,** and **water supply** in low-income countries

Source: JMP Global Baseline Report - 2019

Where we work

Nigeria, Palestine

Primary schools and health care centres not connected to functional water supply

Burkina Faso, Mali

Intervention package

Hands4health is structured around a **systemic approach**. The intervention addresses contextualised gaps and their root causes, and includes an extensive research component in Switzerland and the countries. To investigate the intervention's overall effect, a health impact evaluation will be conducted through cluster randomised controlled trials.

Hardware

Gravit'eau handwashing stations

Chlorination

Rehabilitation

Management and monitoring

WASH FIT

Streams

Monitoring

Digital data collection

Behaviour change

Ranas4HCF

Ranas4Schools

hands4health

focuses on the **most vulnerable** in conflict-affected areas, including remote rural communities and internally displaced people in the four project countries

97,000 people
benefitted

Project stats as of May 2023

No. of institutions assessed for WASH infrastructure

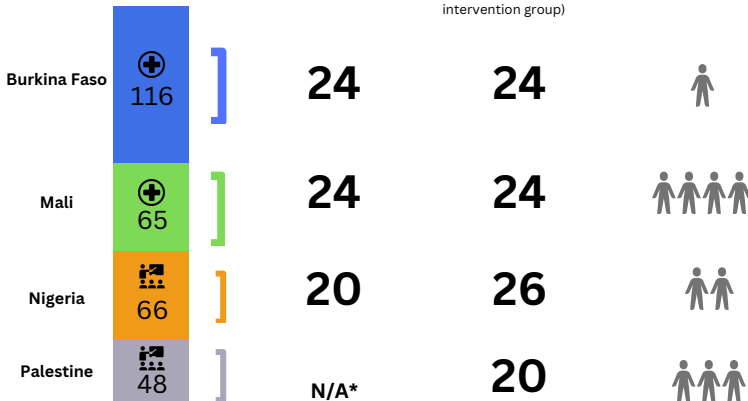

No. Gravit'eau handwashing stations in operation

No. of institutions included in the **intervention phase** in 2023-24 (control & intervention group)

No. of local behaviour change experts (RanasEXPERTS)

©Cesvi

*In Palestine, the intervention focuses on WASH infrastructure rehabilitation and does not comprise the installation of Gravit'eau stations.
